Situational Influences and
Experimental Insights

Conference Abstract: Situated cognition is by now an established research paradigm in cognitive science, both theoretically and empirically, that continues to grow in many areas. This conference aims to represent the trunk of this research tree that connects both its roots and all its newly unfolding branches. A diverse range of speakers and session formats will shape this four day conference of our RTG.

Bochum · Osnabrück
Situating Cognition
RTG | Graduiertenkolleg

Call for Talks and Posters: We invite applications for talks and posters from PhD students and early career postdocs. Any empirical or philosophical research on situated cognition and related areas is welcome. Projects with connections to the topics of the keynote talks are especially appreciated. Further information about the event and submission process is on our event website.
